PROJECTS

Heart Disease Prediction project-Final Year project
Problem Statement:

- Heart disease is a leading cause of death worldwide.
- Early detection is crucial for improving patient outcomes.
- The goal is to develop a predictive model for heart disease using MLP.

Objective:

- Build a binary classification model to predict heart disease presence.
- Utilize medical and lifestyle features as input data for the model.

Expected Outcome:

- The MLP should accurately predict heart disease presence.
- Insights into key predictive features should assist healthcare professionals in decision-making.

Movie Ticket Booking System-Mini Project

Purpose:

- Facilitates online booking of movie tickets.
- Provides a user-friendly interface for easy seat selection and payment.

Key Features:

User Registration and Login:

- Account creation, login, profile management.

Movie Listings and Showtimes:

- Displays current movies with details (synopsis, cast, ratings).
- Shows available showtimes across screens and locations.

Admin Panel:

- Manages movie schedules, pricing, and booking statistics.
- Admin management of user accounts, promotions, and feedback.

DECLARATION

Every detail mentioned above is true to the best of my belief and knowledge
